Rear & Front Projection Film

Rear or front projection film is a paper-thin projection surface with integrated application adhesive for installation on glass and acrylic surfaces. All Screen Solutions rear or front projection films are designed to be projected onto with any projector type other technology that may be used as a projection source. One of many **advantages of rear projection** is that you can stand in front of the **screen** without blocking the light from the **projector** and casting a shadow on the **screen**. This gives more options for stage and room layouts and provides a more professional presentation setup. Rear projection film has a better performance in high ambient light environments than front projection screen

HOW & WHERE TO USE PROJECTION FILMS

Store's window video screen

Turn any transparent surface (Glass/Acrylic) into giant media screen including your store's window using our rear projection film and a rear projector.

Video

Video

Ceiling mounted Screens

Use acrylic panel together with our film and a rear projector and create any portable or ceiling mounted video screen for the store or during tradeshows at a low cost.

E-menu

Our gesture holographic e-book can be used as an innovative way to display menu and various food options images and text including one video.

Video

Our rear projection film contributes in making our virtual presenter that can act like your customers service agent, speaking and delivering messages 24/7 with no mistakes or greeting your visitors up on arrival

Catalogue

Video

Use our front ultra short projection film on an acrylic panel and create a giant Cinema screen at a fraction of the price of conventional screen

Video

Purely Projection Real sky at real time

Using ultra short projection technology we are able to fit the screen into a very low ceiling void with only 450mm between the screen and the slab above.

The projection is extremely lifelike, we can also add a 4K camera mounted on the roof of the building to show the sky outside in real time as well as 4K media player content, we can go too far and add IP cameras in other areas of Saudi Arabia and show the sky from other locations on the skylight.

The benefits of projection is that pricing is cheaper than led and the image quality is very good. Also the mounting is simpler. With LED laser light sources you can now install projection without worrying about lamps or filters needing to be changed.

Video

HOLOGRAM DISPLAYS

A 3D hologram is defined as a 3D projected illusion that exists freely in space and is visible to everyone without the need for 3D glasses.

Holographic projection has been around since the 1940s.

"what does "holographic" mean exactly"?

The term "hologram" was coined by Dennis Gabor in 1949, Hologram is a combination of two Greek words--"holos" meaning "whole," and "gramma" meaning "message"; coming together to create a whole message, or in other words, a complete picture.

Unlike traditional photography, a hologram is a three-dimensional image, or gives the impression of one. Created using light, sometimes in the form of lasers, there are a number of types of holographic techniques that present varying results.

SUGGESTED HOLOGRAM DISPLAYS

HOLOGRAM LED FAN

3D Holographic fan produces an illusion of 3D objects floating in the air. The fast spinning fan becomes nearly invisible to the naked eye and the projected object thus gets a see-through background. The fans are mainly intended for use in advertisement and marketing in stores, shopping malls, airports or other public areas.

TRANSPARENT LED SCREENS

WHERE TO USE

Transparent LED Screen is a type of LED display screen that is clear like a glass (60%-85% transparency) and has functions of an LED. It enables the viewers to see whatever is shown on the glass along with providing a complete coverage of its background as well. Since it enables audience to see what is happening behind the screen, it is also referred to as a see-through screen.
