

WHO WE ARE

VLIVE is a VR enabled communication platform for realistic virtual meetings. The idea of VLIVE was brought to life in late 2019 by LEENIUM.

VLIVE allows users to meet, collaborate and interact with each other virtually without losing the essence of real-world human interaction. Needless to say, it cuts a lot of costs and saves up to 90% of the users' time.

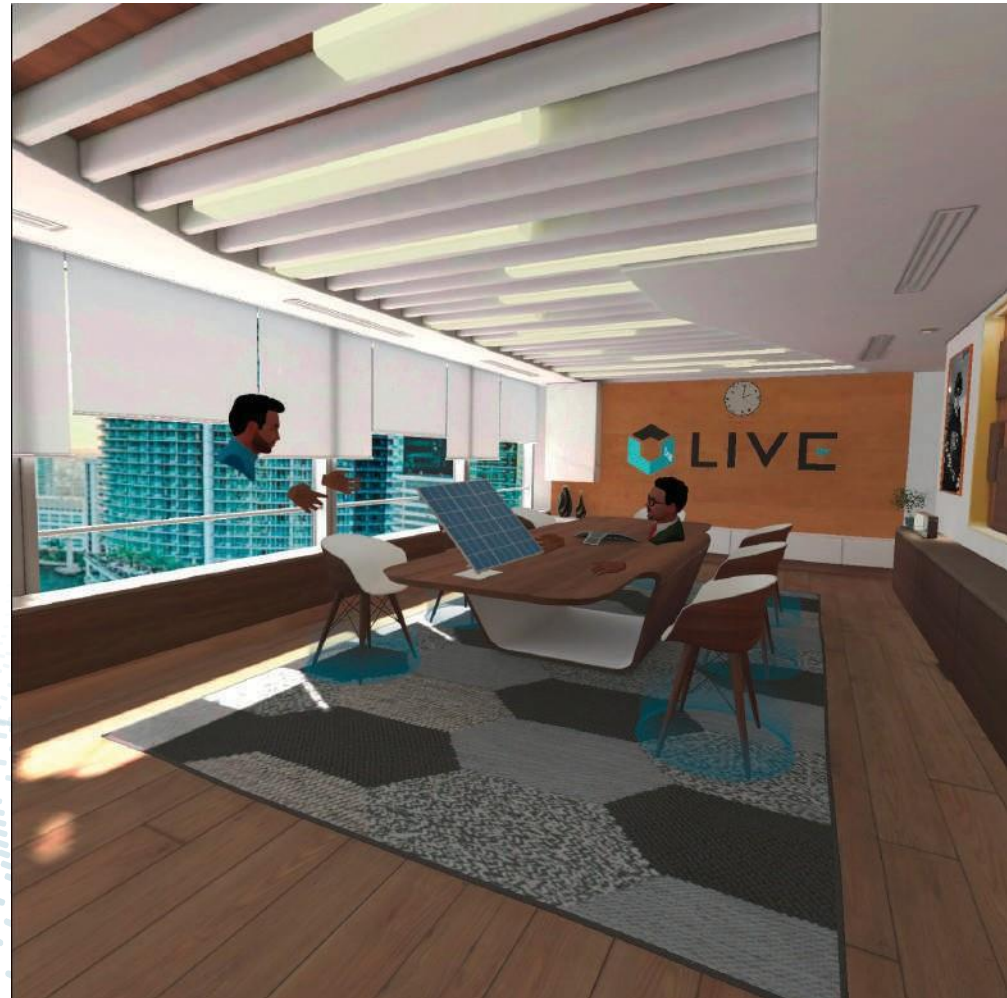

USES:

Meetings:

An important use case of VLIVE is in the companies which have departments far away from each other, or divisions in different areas or cities. VLIVE will help bring them together in a very realistic manner. Additionally, VLIVE has many helpful tools that can make those meetings more productive and efficient.

USES:

Collaborative Feedbacks:

Consider an important design or a project going on where decision makers need to see the prototypes and walk around the project interactively to provide accurate feedbacks. This is where VLIVE comes into play. With VLIVE, decision makers can meet with designers or engineers virtually to see things much more realistically and clearly. This way they can avoid any issues before execution.

USES:

Training:

Training people is a time and capital consuming process. VLIVE eliminates the need of having actual halls, rooms or buildings for students to gather and being taught by the tutor. With VLIVE, one can conduct training sessions without gathering people physically together. This means no restrictions of COVID-19 or no limit on the number of people who can attend the classes. VLIVE saves property expenses for the tutor while transportation costs and time for the attendees. Also, as it is virtual space, 3D models and interactive elements can be used to make learning more interesting.

USES:

Education:

Education becomes fun for students when they can simply wear a headset at their office, home or any comfortable place and attend the classes being conducted at their university or institute. What can be more entertaining than learning with interactive 3D models and graphics?

With VLIVE, no more need for institutes to have any physical place to educate students; No fear of Covid or any contagious disease; Plus, a lot of saving on money and time.

FEATURES

LOCALLY DEVELOPED 01

Locally developed by www.leenium.com in Saudi Arabia.

EASY TO USE 02

Just wear the headset and you are ready to go!

CUSTOMIZABLE 03

Ability to customize branded spaces & special functions upon request.

24X7 SUPPORT 04

Available technical support team easy to reach by phone, chat, or email.

WARRANTY 05

24 months warranty on both software & hardware.

BENEFITS

Why VLIVE

TIME-SAVING & EFFICIENCY

VLIVE helps in cutting as much as 90% of the time, that is, usually wasted in traveling & transportation while the event is not of more than a couple of hours.

REAL TIME COLLABORATION

Put on a headset and instantly share a virtual workspace with anyone, anywhere. Do various activities using VLIVE's convenient built-in tools.

HIGH STAKES, LESS RISK

VLIVE can be used to train people for high-risk processes and procedures without any risk in a safe and realistic environment.

POSSIBLE IMPOSSIBLE SCENARIOS

Train and collaborate in ways that would be impossible or unsafe to recreate in the real world.

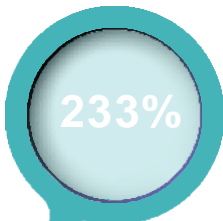

HUGE MONEY SAVING

By cutting the costs of traveling, accommodation and transportation, as well as cutting costs of halls rental or new buildings, VLIVE saves a huge amount of money. This money could instead be spent to boost the business activities pertaining to the growth.

Improvement in performance seen by Johnson & Johnson when using VR training.

Johnson & Johnson

Reduction of in-class training time at Hilton in comparison with traditional methods.

Hilton

Nestlé

Nestle Purina's annual savings by training 10 salespeople a month in VR.
